the history verse app is the graduation project for students studying engineering at The Beheira Higher
Institute of Engineering & Technology.
it was devolped under the supervised of Dr.Mahmoud Gamal.

- History of the Greco-Roman museum Alexandria:

The idea of establishing the museum began in 1891 when the Italian archaeologist "Giuseppe Bouet" thought of allocating a place that contains the archaeological discoveries that were discovered in Alexandria, in a way that works to preserve its cultural history, especially after these discoveries were deposited in the Bulaq Museum in Cairo.
Then the German engineer Dirtisch and the Dutch engineer Leon Stenon built the current museum building in the style of Greek buildings, and the museum was opened for the first time during the reign of Khedive Abbas Helmy II on September 26, 1895.

- Museum development project: -

The museum was closed in 2005 with the aim of starting its restoration project, and indeed it was started in 2009, but it stopped in 2011 due to the lack of financial funds at that time, and work resumed on the project in 2018 until it was fully completed and opened today.
The museum development project includes wall paints from the outside and inside, strengthening the old walls of the museum with an iron structure, restoring the museum's classic façade, as well as developing the lighting and monitoring systems, in addition to providing a hall called (egypsotica) with a group of gypsum reproductions, some of which were displayed in the old museum, in addition to an educational section, a museum archive, a historical library, stores, and a restoration center. The project also included raising the efficiency of the services provided to visitors in a way that improves the tourist experience and makes it more attractive and accessible, as the museum was provided with cafeterias and a gift house, and the museum was also made available to receive facilitated tourism for people of determination, where toilets, elevators, and places for museum education were allocated for them.

- Museum components:-
• Administrative building: - It consists of a basement, a ground floor, 3 repeated floors.

Hall 22:-

There are these The hall has a variety of artifacts Old Canopus, which is dedicated
by Prince Omar Toson and a rare marble statue White and marble head of the Asian idol and a set of
pottery jugs.

The naous:

The naous dates back to the Greco-Roman era, crafted from wood coated with a layer of colored gypsum. Atop the naous is an depiction of a falcon, symbolizing the god Horus. Illustrated on the naous are excerpts from religious texts, along with rituals related to the erection of the Djed pillar. In ancient Egypt, the Djed pillar was closely associated with Osiris, sometimes described as his spinal column. When the Djed pillar was laid horizontally, it symbolized the death and burial of Osiris. When erected vertically, it represented the resurrection of

Osiris. Ancient Egyptians celebrated the ritual of raising the Djed pillar at the end of the flood season (Akhet), symbolizing the pre-creation state of the universe.

Ras Syabeis:

The history of the head dates back to the 2nd century BCE and was discovered in the Canopus region (Abu Qir)
in Alexandria during the underwater excavations in 1999. The head is made of white marble,
believed to be part of a colossal statue ranging between 4 to 5 meters in height.
Syabeis is a Greco-Egyptian deity, serving as the primary god of Egypt since the time of Ptolemy I.
Seeking to unify the Greeks and Egyptians in a common worship, Syabeis was created through the amalgamation of
the Egyptian god Osiris and the Greek god Apis, resulting in the deity Serapis,
along with his wife Isis and their son Harpocrates. Revered as a god of healing and the afterlife, a temple,
the Serapeum, was dedicated to him in Alexandria. He was depicted either in human form or in the shape of
the Greek god Apis.
Here, Serapis is depicted in human form - in the Greek manner - with curly hair,
a dense beard, and five locks of hair falling onto his forehead. At the top of his head,
there is a horizontal circular surface with a square opening in the center as a point for the kathos,
decorated with a slight engraving of two similar plants. The kathos, resembling a basket-shaped upper hat,
was used to carry fruit and served as a symbol of abundance and fertility in ancient Greek art.

the god Osiris:

The statue of the god Osiris dates back to the Late Period and is crafted from wood adorned with a layer of gold.
It depicts the god Osiris standing in the form of a mummy, wearing the white crown, the supreme crown of Egypt, on his head.
Osiris is considered the son of the god Geb, lord of the earth, and the goddess Nut, mistress of the sky.
He is the brother of the revered deities Set and the goddesses Isis and Nephthys. Osiris married his sister Isis and,
as a king, ruled the land, imparting knowledge of agriculture and various arts to humanity. Osiris is regarded
as the lord of eternity, ruler of the dead, and the governor of the afterlife. In ancient Egypt,
he symbolized goodness and prosperity. Tragically, he was killed by his malevolent brother Set.
After his death, Osiris became the ruler of the deceased, presiding over the trial in the afterlife where every deceased person would stand. Every deceased king was considered a legitimate heir to his son Horus on Earth.
Osiris, associated with the renewal and rebirth, was revered as the god of the dead and resurrection in the afterlife.
He was linked to natural phenomena symbolizing renewal and rebirth.
Osiris symbolized the fertility of the Nile,

and his black color was directly associated with the fertile soil. Osiris' connection to the Nile represented the source of soil enrichment in Egypt, with the annual flooding serving as a driving force for the fertility of the land. Osiris was seen as the bestower of life for all creatures, as he was intricately connected to the flourishing of life on Earth.
